**SWIFT's Customer Security Program - Supporting the Community in Strengthening Security**

Cyber-attacks are growing in number and sophistication and attackers are focusing more deeply inside banks. Recently publicized cases show attackers have started by exploiting security weaknesses within institution's local environments to steal valid operator credentials to their local payment infrastructure. They input seemingly legitimate payment instructions with those valid credentials and hide the evidence of fraud. Combating fraud is a challenge for the whole industry – there are no quick fixes. The threat landscape adapts and evolves by the day, and while customers are responsible for protecting their own environments, SWIFT's Customer Security Program (CSP) has been established to support customers in the fight against cyber-attacks. This session will provide an overview of the program, the successful milestones already achieved and how we continue to jointly work to mitigate the risks of these ever-increasing threats.

**Build Your Cyber A-Team and Strengthen the Cybersecurity Workforce**

Building and maintaining a strong cybersecurity team can be challenging. Employers often struggle to find candidates with the right skills and spend months training them, only to lose them to a competitor. Fortunately, new standards have prompted the creation of programs, tools and guides that can help. In this session, participants will be guided through the tools, templates and information that DHS has developed for organizations as they address cybersecurity workforce planning, recruitment, retention and training issues. Additionally, learn about the National Cybersecurity Workforce Framework and how you can use it to strengthen the cybersecurity workforce!
